

*Using*  
***Predictive Maintenance***  
*concepts for structure integrity*  
*in the IAF*

LtC. Rotem Halevi  
IAF ASIP Lead Engineer

ASIP Conference  
Dec. 2007

**Co – Authors:**

**LtC. Sasson Bar – Moshe**

**LtC Arie Atzmoni**

**LtC. Dr. Izack Cohen**

**Major Moti Ben Nun**

**Major Nir Kaplan**

**Captain Chaim Ishbir**

**Cap. Dr. Gonen Zinger**

# *Presentation Outline*

- **IAF & ASIP overview**
- **What is predictive maintenance?**
- **PdM and ASIP**
- **Embedded sensors**
- **Usage DB**
- **Summary**

***Background  
IAF, ASIP***

# *F-15*

**-unclassified-**

# *F-16*

# *C-130*

**-unclassified-**

***CH-53***

***UH-60***

**-unclassified-**

*A-4*

*Zukit*

# *AH - 64*

**-unclassified-**

***AH-1***

***UH-1N***

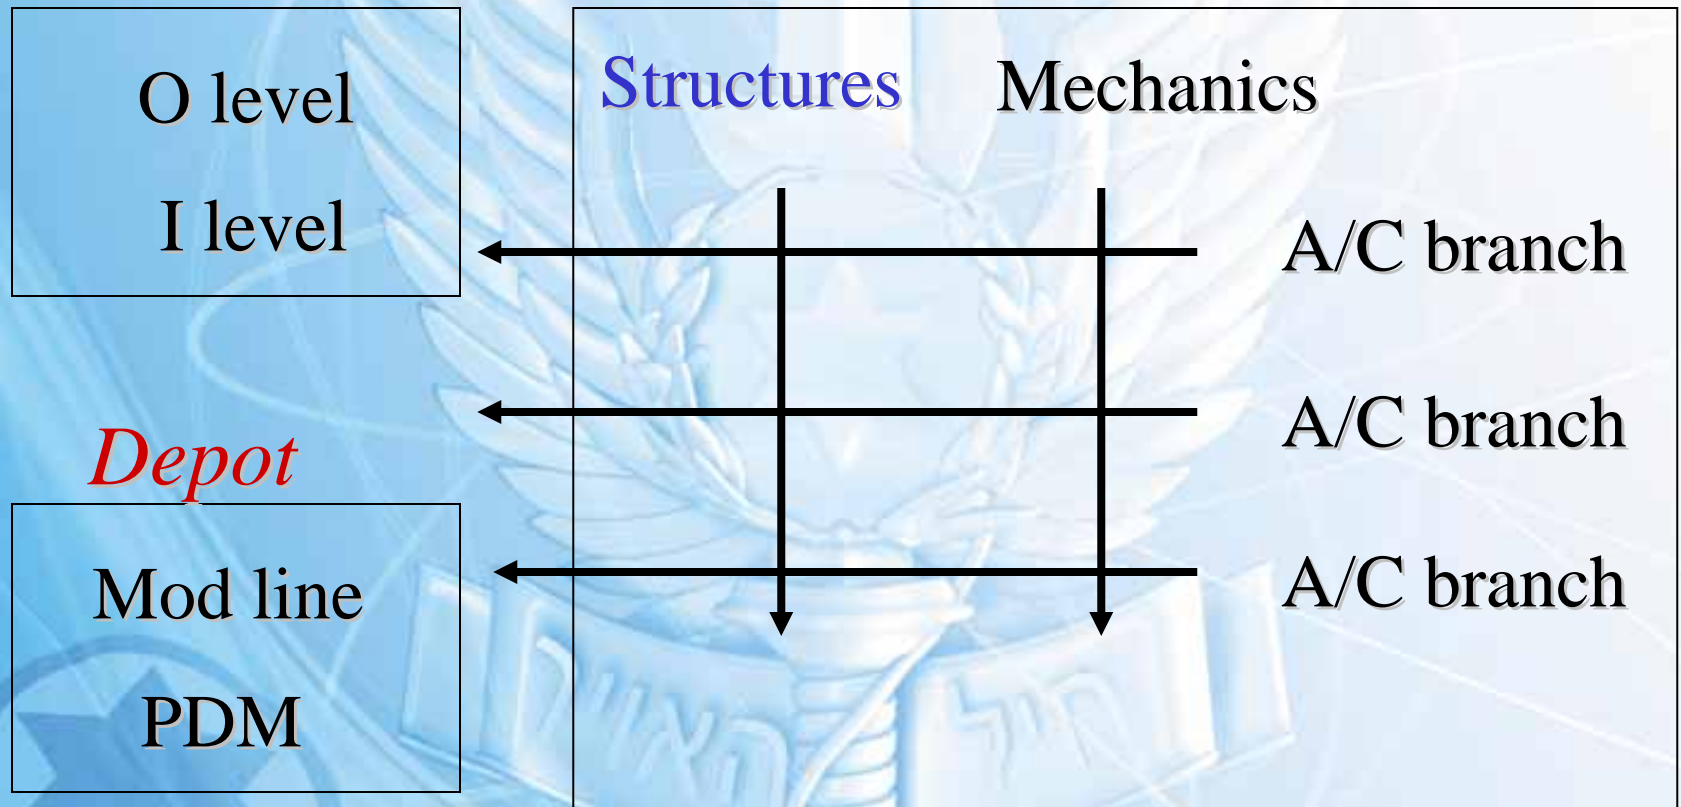

**-unclassified-**

# *IAF ASIP Implementation*

*Base*

*HQ*

# *Structures branch*

- Structure Branch groups
  - NDI
  - Fatigue and DT
  - Tools
  - Materials
  - Technology

# *Fatigue and DT group*

- Structures and mechanical fatigue critical parts
- Usage survey (LESS) and individual aircraft tracking (IAT)
  - Processing and reporting
- Fatigue substantiation programs
- IAF FSMP
- Analytical capabilities
  - FEM, crack growth, crack initiation, risk, fatigue test lab
- Failure investigations

# *What is Predictive Maintenance?*

-unclassified-

# *What is predictive maintenance?*

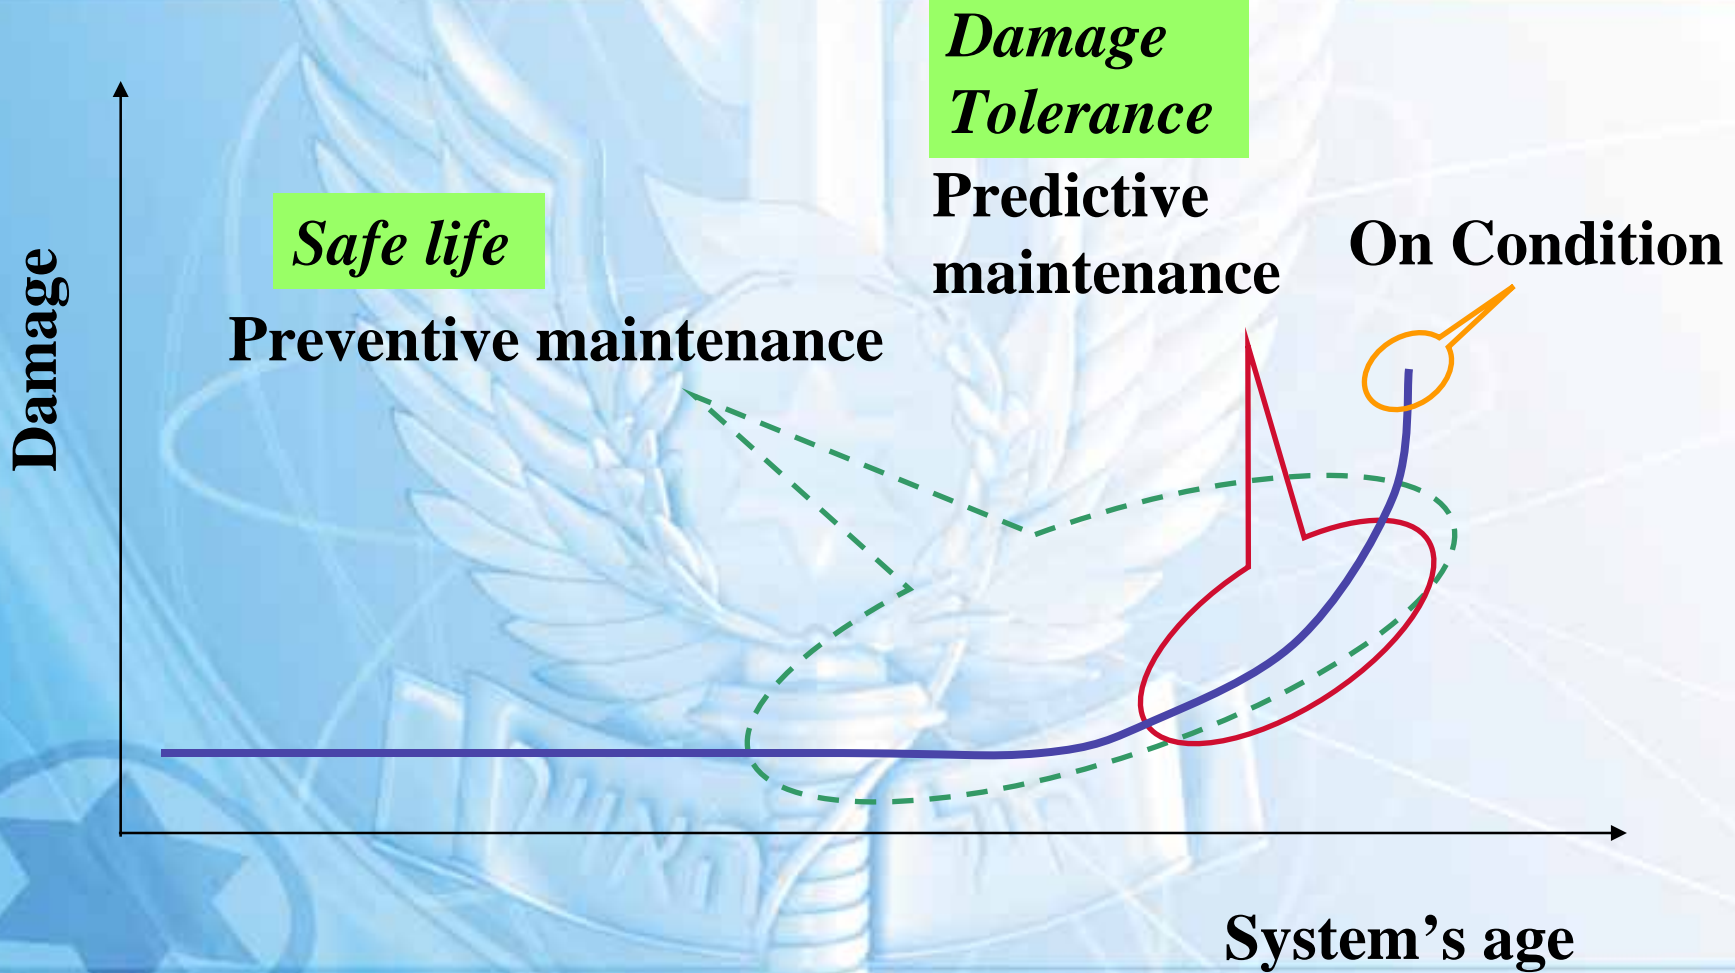

*Predictive maintenance is a **condition based maintenance** program*

*Instead of relying on average life statistics to schedule maintenance activities, predictive maintenance uses **direct monitoring** of the mechanical condition*

# *What is Predictive Maintenance?*

*For ASIP*

# *Predictive maintenance activities*

*For ASIP*

Use recorded flight data

Install new sensors

Increase use of  
recorded flight data

Embedded  
structural sensors

Can we predict failure  
using this data?

Test and analyze

Implement predictive maintenance

# *IAF activities*

IAF initiated two activities:

- Embedded structural sensors
- Usage Data Base

**“Low hanging fruits”**

# *Embedded sensors*

# Embedded sensors

**MWM sensors**

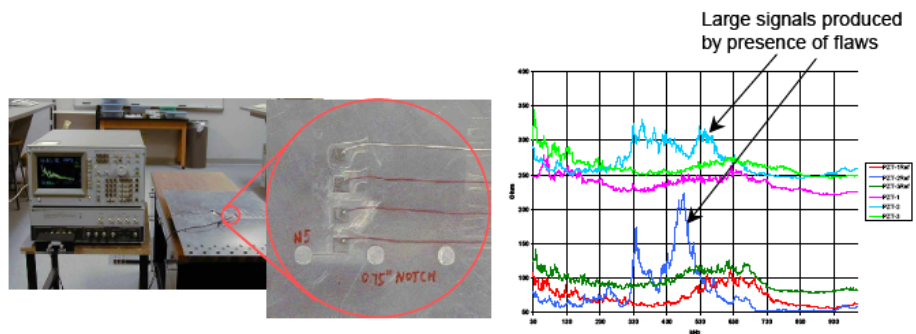

**Figure 4: Crack Detection Via CVM System and Aircraft Test Installations of Sensors**

## VCM sensors

**Figure 22: Fiber Optic Sensors in Adhesive Bondline and FO Monitoring Equipment**

## Fiber optic sensors

**Figure 7: Piezoelectric Sensors on an Aircraft Panel Containing Crack and Corrosion Damage (left). Results Obtained with the E/M Impedance Technique Using Active Sensors (right)**

## Piezoelectric sensors

# *Embedded sensors advantages*

- One disassemble – save disassembles cost and damage
- Inspection repeatability
- Higher POD and sensitivity
- Less training

**Goal:**  
**Higher safety - Lower cost**

# *Embedded sensors - Status*

Not in our  
program

- FAA: “*The use of in-situ sensors for ~~real time~~ health monitoring of aircraft structure appears to be a viable option in the ~~near future~~.*” (FAA airworthiness assurance center 2006 – ~~presented at ageing aircraft conf.~~)

Now

- Army: Condition Based Maintenance (CBM) project.
- Many tests – in lab and some on aircraft. Sensors includes: Comparative Vacuum Monitoring (CVM), Piezoelectric Transducers (PZT), Fiber optics, Remote Field Eddy Current (RFEC), Meandering Winding Magnetometer Probes (MWM) and others .

# *Embedded sensors - Status*

Although technology seems mature and advantages are clear, there is no structural embedded sensor in any IAF aircraft

# *Crack detection/propagation sensors*

- Crack Detection / Propagation Sensor (CDS / CPS)
  - Crack tears a wire and changes the sensor's resistance
  - Used in lab fatigue tests for many years
  - Was installed under a patch repair of F-16 lower wing skin 15 years ago. Sensor showed good results

# *Crack detection/propagation sensors*

CPS in the Lab

Crack Propagation Sensor (CPS)

Crack Detection Sensor (CDS)

# MWM - Embedded sensors

- MWM embedded sensor
  - Eddy current sensor
  - Proven in lab
  - Use IAF existing equipment

# *Criteria for sensor location*

- Non safety of flight
- Areas that can not be inspected without embedded sensors or hard to inspect
- Assemble and disassemble are costly (man hour or damage)
- Wiring space
- Environmental limitations
- Quick cracking
- Critical crack size – Sensor detection capability

# *Crack Detection Sensors*

Typical crack locations

# *Crack Detection Sensors*

# *MWM embedded sensors*

A-4 front spar cracking

# *MWM embedded sensors*

-unclassified-

# *MWM embedded sensors*

-unclassified-

# *MWM embedded sensors*

-unclassified-

# *MWM embedded sensors*

-unclassified-

# *Looking for corrosion detection sensors*

-unclassified-

# *Usage database*

-unclassified-

# *Usage database*

- Some a/c have flight data recorders but do not have LESS/ IAT compatible software
  - Data is used for debriefing or mishap investigations
  - Not stored for usage tracking
- OEM cannot use this data – Use of **pilot questionnaire**

-unclassified-

# *Usage database*

## Example

Gear failure

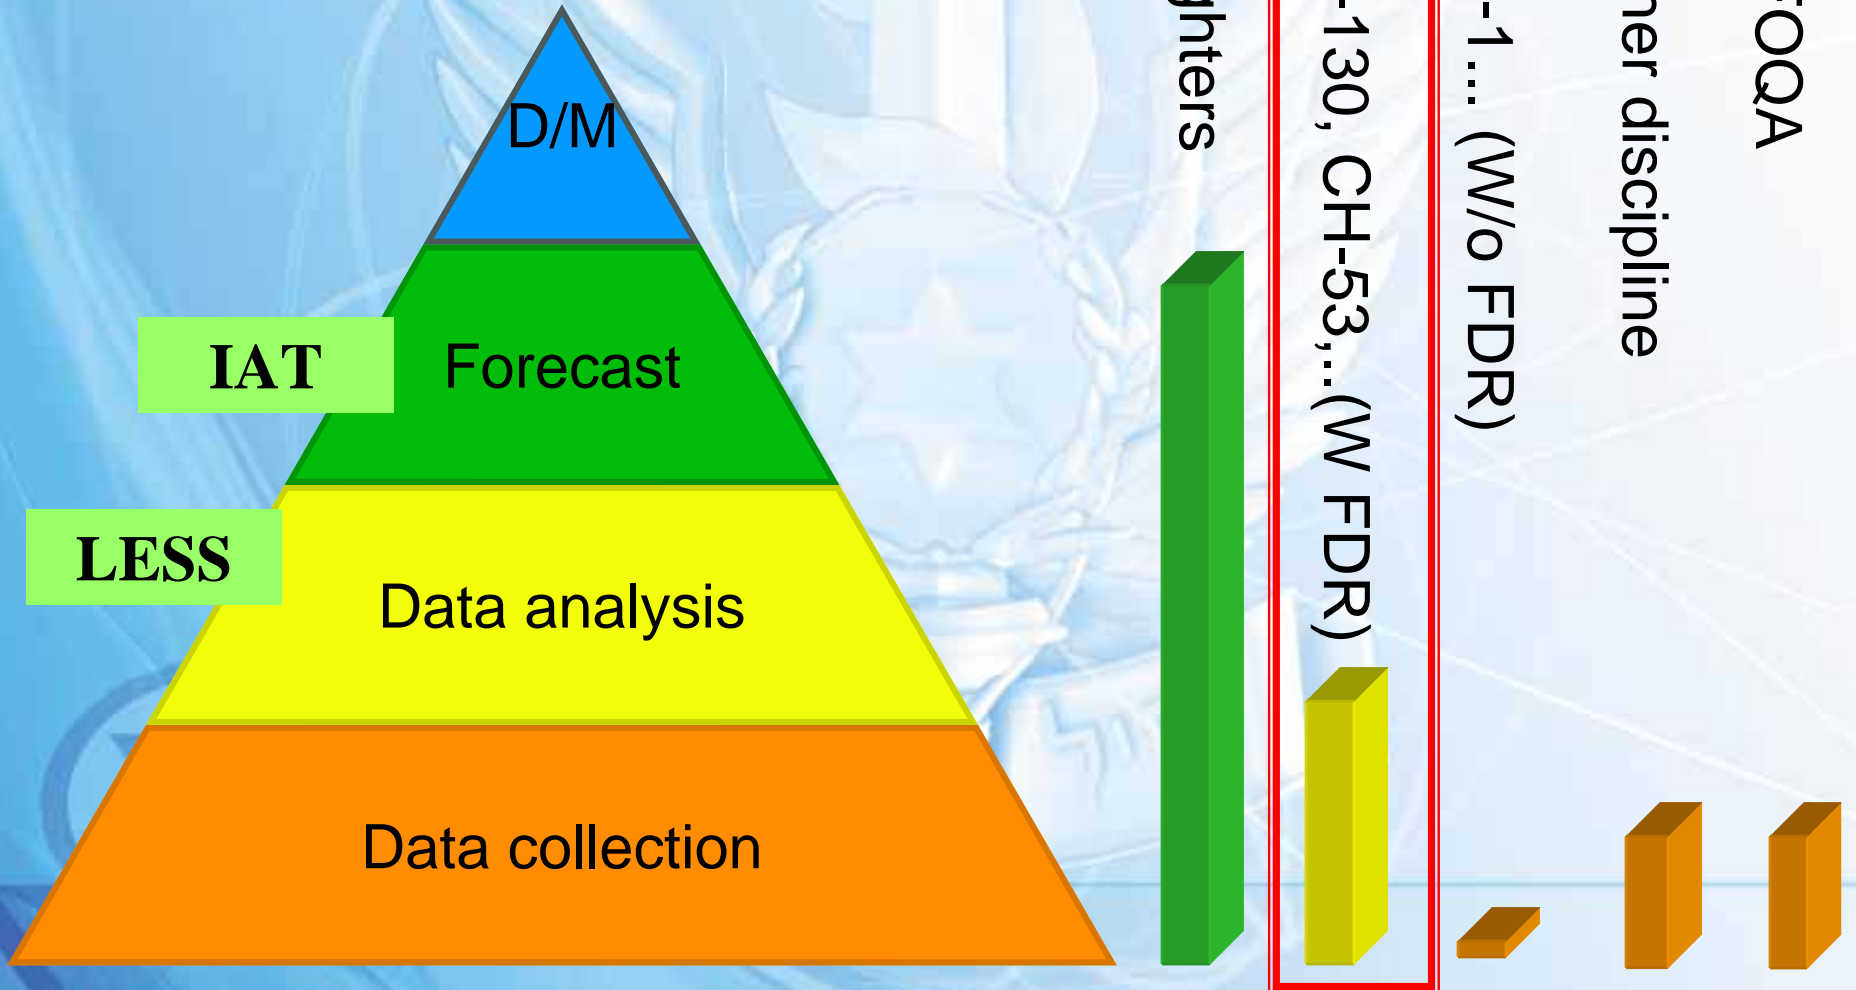

Torque exceedances  
taken from CDR data

# *Usage database*

- Other needs for the flight recorded data:
  - Military Flight Operations Quality Assurance (MFOQA)
  - Pilot debriefing
  - Predictive maintenance for other systems
  - Health Usage Monitoring Systems (HUMS)
- Joining effort helps getting the needed budget and resources

# Usage database

# C-130 missions classifying system

Twin  
Peaks

Cruise  
&  
Peak

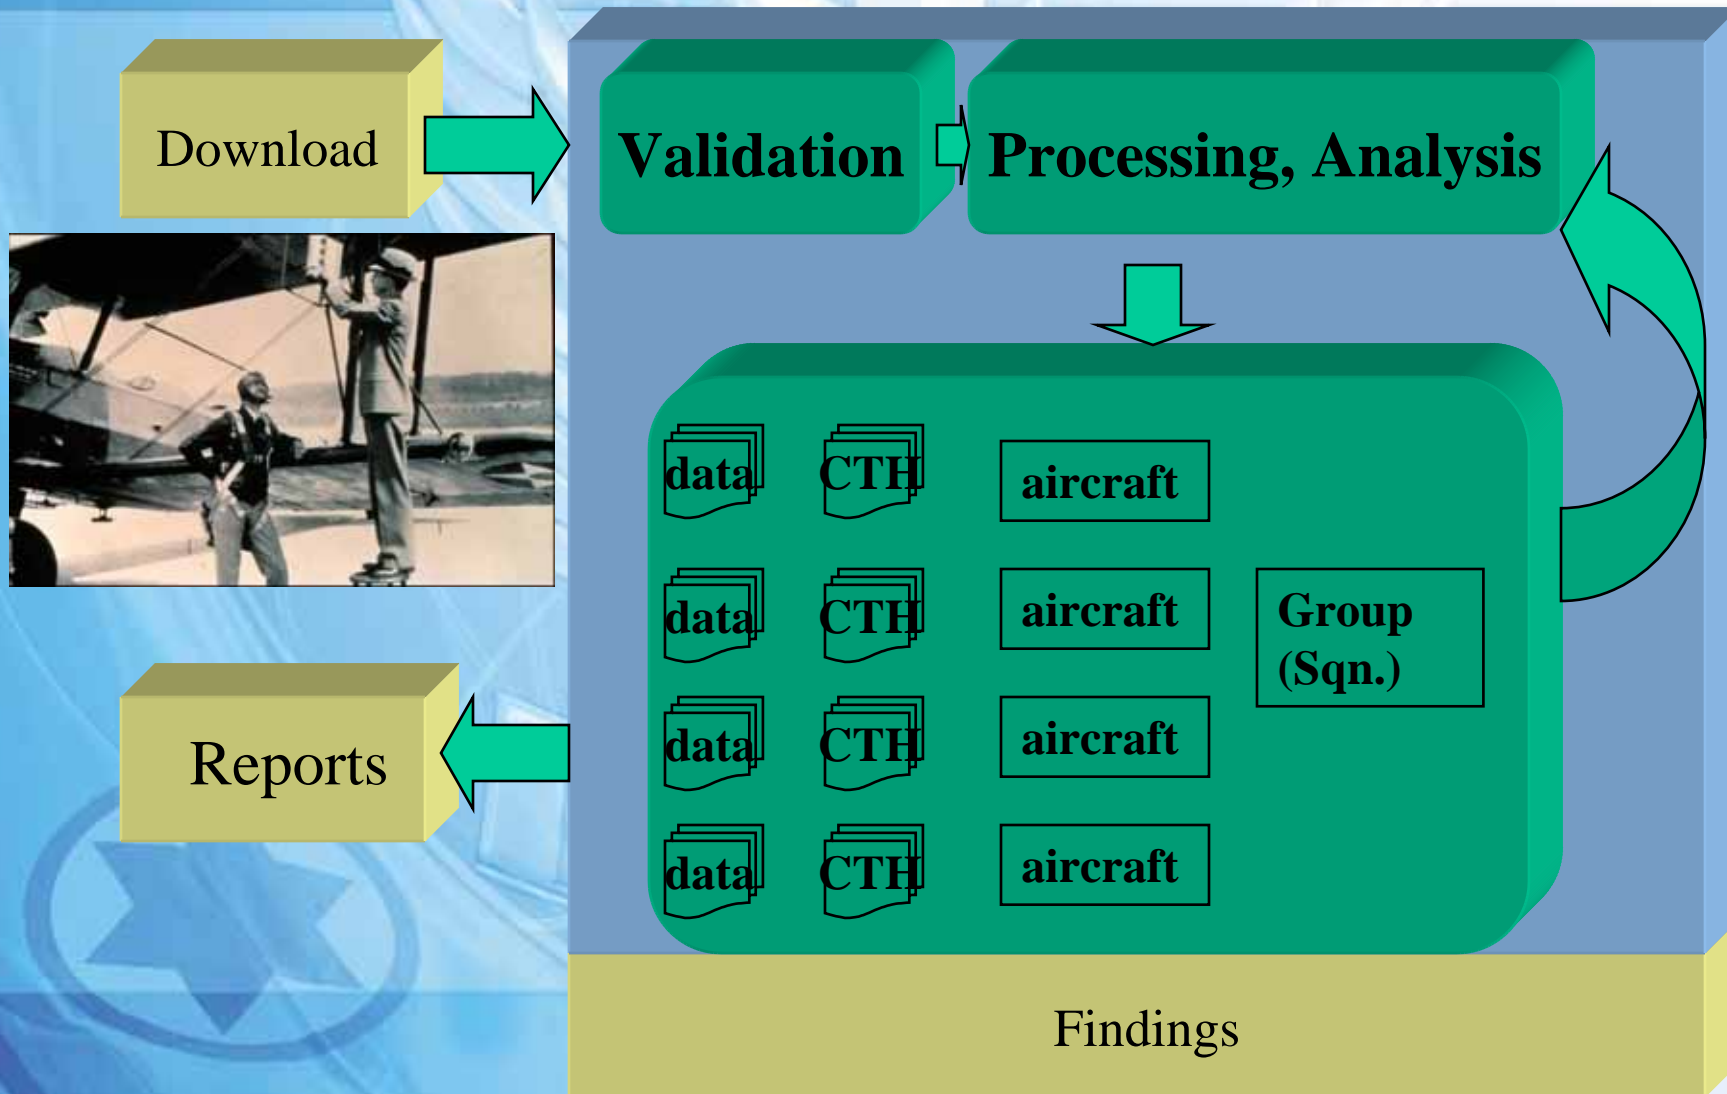

# *DB benefits for ASIP*

- Identify usage change
- Compare different groups
- Support mishap investigations
- Limited individual aircraft / components tracking
- Future use

# *Data base structure*

CTH = Compressed Time History

-unclassified-

# *Data Analysis*

- Average flight time
  - Alt – Velocity graph
  - Nz, RPM exceedance tables
  - Weight
- 
- Mission name
  - DB is built in a way that it would be easy to define and implement new analysis on history data (CTH)

# *The implementation concept*

- Based on existing software and hardware (except for HD)
- Almost fully automated process
- A CH-53 DB prototype was established

Analyze by I/T system

# Reports

- Similar to LESS report
- Graphs and tables
  - Compare time intervals
  - Compare groups
  - Available on the IAF net

# *Summary*

- Predictive maintenance (PdM) is a maintenance concept developed in the recent years
- Increases safety and reduces costs
- PdM and ASIP:
  - Different point of view of ASIP activity
  - Joint vision of future maintenance with other discipline
    - Gain budget and resources

# *Summary*

- As part of PdM activity, structures branch initiated two projects:
  - Embedded sensors
  - Usage database
- Implementation within few months
- Future projects are in plan
- Looking to share ideas and effort

Questions???
